## SUMMARY

I fell in love with PHP web development all the way back in 2012, when I was in class IX, and since then I stucked myself in this path of knowledge. I have experience of developing websites, web-apps, REST API with Laravel PHP Framework, and I have also developed Open-source composer dependencies. In front-end, I like to work with VueJS. I also have learnt some other programming languages while working on some academic projects, C# is one of them that I loved so much.
